

Jensen Seeds A/S

YOUR DANISH PRODUCTION PARTNER FOR QUALITY SEEDS

Company profile

History

Jensen Seeds A/S is an independent privately owned seed production company founded in 1960 and since 1967 located in Birkum near Odense.

Objectives

Our main objective is to be the competent and reliable supplier to the seed industry of high quality custom seed production of vegetables and herbs.

Products

Our main crops for custom seed production are hybrid spinach, scorzonera, Chinese cabbage, hybrid pak choi, chrysanthemum garland, corn salad, peas and the herbs chervil, chives, parsley and thyme.

Our production is mainly on the island of Funen. Furthermore we have some production on the islands north and south of Funen and also on the east coast of the mainland - Jutland.

Climate

The climate in Denmark provides ideal conditions for excellent seed quality.

The summer in Denmark has moderate day temperatures, cool nights, long day length (because of the country's position on the 55th northern latitude) and sufficient rainfall.

Generally the western parts of the country has atlantic climate and the eastern parts continental climate, but this picture is modified because Denmark is an archipelago.

The yearly precipitation is over 900 mm in some parts of Jutland and below 500 mm over The Great Belt between Jutland and Seeland. The rain is more or less even distributed through the year, but as the evaporation is less in the cool months october to march, the winter is the most humid time of the year.

July is the warmest month with a mean temperature over 17,5 C° in southeast and just below 16 C° in the northwest of Jutland. A day temperature above 30 C° during the summer is very seldom. January is the coldest period in Denmark, but the mean temperature of 0 C° is more even throughout the country because of the warming effect from the surrounding sea.

Facilities

We own 22.000 square meters land on which our facilities cover 4.000 square meters used for processing, storage and office.

Processing capacity

We have a full automatic intake and 4 seed processing lines, which have an annual capacity of 4.000 tons.

Storage

We have a storage capacity of 1.000 tons of seed.

Growers

We have 200 seed growers available for growing quality seeds on 2000-3000 ha land.

Quality

We use the most advanced technology, equipment and quality control to guarantee our customers the highest seed quality and purity.

Isolation

Jensen Seeds A/S keeps a controlled isolation distance between the fields before sowing to avoid crosspollination. Also a good crop rotation is made to avoid volunteer problems.

Field inspection

Our field inspectors are controlling the fields constantly during the growing season. All remarks are registered in our IT-system and reported to our customers by weekly/monthly updates available online.

Seed quality control

During processing we control the quality constantly. When the quality fulfills our high standards, the seeds will be packed and sampled.

The final sample of the motherlot will be controlled once more for purity and germination by the official Danish seed laboratory at the Danish Plant Directorate (Plantedirektoratet). An official quality certificate is issued on each seed lot from this authority. (The directorate is a part of the Danish Ministry of Food, Agriculture and Fisheries).

Customers

Our main customers are the leading vegetable seed companies in Europe, U.S.A. and the Far East.

Products

Annuals Orientals

Crop Annuals - Orientals	Min. ha.	Yield kg/ha average	Stock-seed kg/ha	Sowing month	Harvest month	Min. purity/ germination/ moisture %	Remarks

Conditions of sale

- All orders are booked subject to crop and subject to safe receipt of crop.
- Crop failure releases us entirely from delivery.
- Customer accepts to take over the entire yield of the contracted area.
- Bags and other containers will be charged at cost and are not returnable.
- Unless we are instructed otherwise, all seeds are sent ex warehouse Odense for account and risk of the buyer by the best available route without assuming any responsibility in this respect.
- Payment 30 days net from date of invoice, unless otherwise agreed.
- Stock seed to be delivered free of charge Odense.
- We give no warranty, expressed or implied as to the description, quality, productiveness, or any other matter of any seeds we sell, and we will not be in any way responsible for the crop, or failure of crop.
- Our liability, whether contractual or otherwise, is limited to the amount of the purchase price of the seed under all circumstances and regardless of the nature, cause or extent of the loss.
- Any dispute originating from the trading relations shall be settled by the Maritime and Commercial Court in Copenhagen and national Danish law shall apply.
- Apart from the above conditions, both the General Sale Conditions and the I.S.F. Conditions will apply to this order, unless otherwise agreed upon, and in so far as latter do not differ from the above.
- Germination/purity certificate issued by the Danish Plant Directorate (ISTA-member) shall be valid.
